Virginia receives more foreign gifts than the average school, both in number and total monetary amount. However, given its size and status as a public university, UVA has a surprisingly small foreign income compared to similar colleges in the United States. Gifting to UVA is almost non-existent from some of the highest gifting countries overall, though UVA is able to make up ground through high-earning from other countries. Virginia succeeds in the areas of science and medicine, with some of their top giftors coming from these disciplines.

Among the entire dataset, some of the top gifting countries stand out, due to their wealth exceeding their nation sizes. For instance, Qatar has given \$2.71 billion dollars to US universities. Saudi Arabia, another Middle Eastern country, has also given over a billion dollars. The top 3 gifting organizations are all based in Qatar, with the most money coming from the Qatar Foundation. The Saudi Arabian Cultural Mission has given the most overall gifts as well. Besides these, most of the top giftors are focused on medicine and scientific research. The Human Frontier Science Program, along with the Novartis Pharmaceutical Corp, also land in the top five of gifts given.

While UVA has succeeded in receiving gifts from pharmaceutical and scientific companies, it has failed to break ground in the Middle East. UVA's top giftor is AstraZeneca, a Swedish pharmaceutical company, with many other gifts coming from hospitals and research institutes. However, UVA has not received any gifts from Qatar or Saudi Arabia, while comparable universities have. Georgia Tech, another public ACC university, has been given over \$20 million by Saudi Arabian organizations. In comparison to other public state schools such as Georgia Tech, University of North Carolina, University of Florida, and University of Maryland,

Virginia does not receive as much money from the highest-spending countries. UVA receives less than both Georgia Tech and Maryland from every top-donating country.

UVA has not received any money at all from Qatar, China, Saudi Arabia, and Canada, which are all in the top six highest gifting countries. Every public state school mentioned above makes over \$1 million from these countries, with Georgia Tech making \$38 million. These countries are sources of money that UVA should prioritize. They have the most money to spend, and there is no reason for UVA to receive none of it while similar schools do. Even if UVA only was willing to take money from allies of the United States, they are still earning little from countries such as Canada, England, and France.

UVA should seek to maintain the gifts they currently receive, while increasing the amount of gifts from top-spending countries. Currently, UVA benefits from some lower-spending countries, such as Bangladesh, Sweden, and Tanzania, which are UVA's highest giftors by amount. UVA earns more money from Bangladesh than any other school, and Bangladesh is the only country for which this is true. UVA should prioritize not losing their ground in these countries, while still increasing gifts from elsewhere. Overall, UVA could benefit most from pharmaceutical companies in Canada and Europe, while Qatar and Saudi Arabia could also be sources of extra money. Despite being a top five public university, UVA falls behind other public universities in gifts. UVA can be much more successful if they get on par with these schools, particularly from top giftors.
